

WHAT WE CLAIM IS:

1. A method of slitting an electrode raw material sheet of an electrical component, comprising steps of:
 - slitting the electrode raw material sheet of the electrical component by a blade section;
 - reshaping and smoothing convex portions on the slit electrode; and
 - removing fragments adhered on the slit electrode.
2. A method of slitting an electrode raw material sheet of an electrical component according to Claim 1, further comprising a step of:
 - removing a number of fragments adhered on the slit electrode by an air flow.
3. A method of slitting an electrode raw material sheet of an electrical component according to Claim 1, further comprising a step of:
 - removing a number of fragments adhered on the slit electrode by a brush.
4. A method of slitting an electrode raw material sheet of an electrical component according to Claim 1, further comprising a step of:
 - removing a number of fragments adhered on the slit electrode by a pair of brushes facing both surfaces of said electrode.
5. A method of slitting an electrode raw material sheet of an electrical component according to Claim 1, further comprising a step of:
 - removing a number of fragments adhered on the slit electrode by a sheet roll.
6. A method of slitting an electrode raw material sheet of an electrical component according to Claim 5, wherein
 - said sheet roll has plural vents thereon.
7. A method of slitting an electrode raw material sheet of an electrical

component according to Claim 5, wherein
said sheet roll is a non-woven fabric.

8. A method of slitting an electrode raw material sheet of an electrical component according to Claim 1, further comprising a step of:

removing a number of fragments adhered on the slit electrode by a brush and a sheet roll.

9. A method of slitting an electrode raw material sheet of an electrical component according to Claim 1, further comprising a step of:

reshaping and smoothing a convex portion on an electrode by rolling said electrode between a pair of rolls.
